

Industrial Water Treatment

High Performance Resource Saving Type/Mixed Bed Ion Exchanger "MAX FLOW"

This is a compact mixed bed ion exchanger which adopts an unique internal structure, attaching parts and regeneration process.

Features

- High-pure quality of water can be obtained
High-pure-level water quality can be achieved.
- The amount of wastewater during regeneration is small
Because the amount of wastewater during regeneration is small, the neutralization system can be minimized in size.
- Raw water can be used as regeneration water
Even if an advanced wastewater treatment quality is required, raw water can be utilized as regeneration water.

Application

- Electrical component wash water
- FPD manufacturing water
- Process water
- Food manufacturing water

Water Infrastructure Marketing and Sales Department for Private Sector, Marketing and Sales Division, Environmental Engineering Business Unit, Kobelco Eco-Solutions Co., Ltd.
