

## Water Treatment Process

### Open Siphon Filter/OSF

#### Safe and reliable filtration

Open siphon filter (OSF) is a gravity-type open filtration equipment using the siphon mechanism.

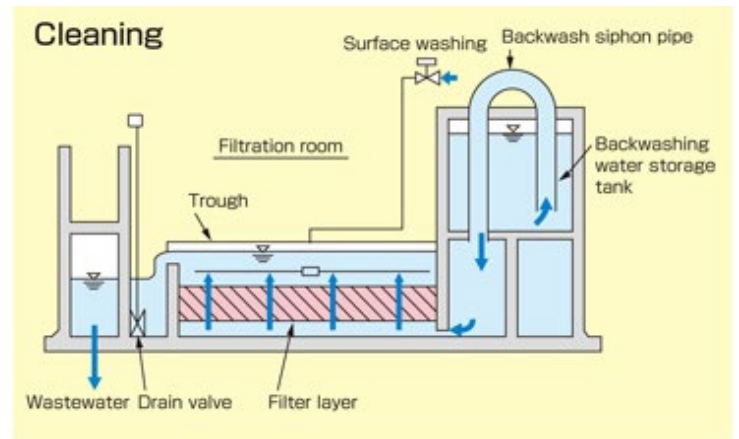

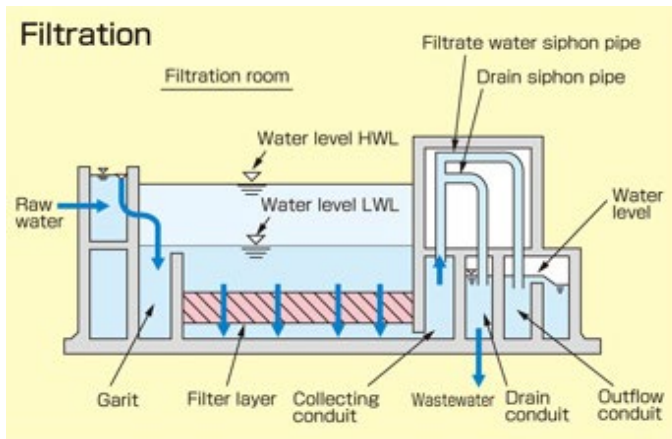

Equipped with the original backwash storage tank and using the siphon tube, it is easy to switch processes between filtration and backwash.

#### Features

- Filtration mechanism excellent in safety and reliability
- Adjustment mechanism of quantity of filtration water is unnecessary
- Structured that no negative pressure occurs in filtration
- Large cleaning effect, small operation cost
- Number of tanks to be installed can be selected

#### Mechanism

#### Application

- Rapid filtration equipment
- High-speed filtration equipment for advanced treatment flow
- Biological waste treatment equipment
- Activated carbon filtration equipment
